

LMK61XX 高性能超低抖动振荡器

1 特性

- 超低噪声、高性能
 - 抖动: $F_{out} > 100\text{MHz}$ 时的典型值为 90fs RMS
 - PSRR: -70dBc , 强大的电源抗噪性
- 支持的输出格式
 - LVPECL 高达 1 GHz
 - LVDS 高达 900 MHz
 - HSTL 高达 400 MHz
- 总频率容差: $\pm 50\text{ppm}$ (LMK61X2) 和 $\pm 25\text{ppm}$ (LMK61X0)
- 3.3V 工作电压
- 工业温度范围 (-40°C 至 $+85^{\circ}\text{C}$)
- 7mm x 5mm 6 引脚封装, 与行业标准 7050 XO 封装引脚兼容

2 应用

- 晶体振荡器、SAW 振荡器或芯片振荡器的高性能替代产品
- 开关、路由器、网卡、基带装置 (BBU)、服务器、存储/SAN
- 测试和测量
- 医疗成像
- FPGA, 处理器连接

3 说明

LMK61XX 是一款超低抖动振荡器, 可生成常用的基准时钟。该器件在出厂前进行了预编程, 支持任何基准时钟频率; 支持的输出格式包括 LVPECL (最高 1GHz)、LVDS (最高 900MHz) 和 HCSL (最高 400MHz)。内部电源调节功能提供出色的电源纹波抑制 (PSRR), 降低了供电网络的成本和复杂性。该器件由单个 $3.3\text{V} \pm 5\%$ 电源供电。

T _{STG}	Storage temperature	-40	125	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±4000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1500

(1) JEDEC document JEP155 states that 500 V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250 V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

8 Power Supply Recommendations

For best electrical performance of LMK61XX, TI recommends using a combination of 10 μF , 1 μF and 0.1 μF on its power supply bypass network. TI also recommends using component side mounting of the power supply bypass capacitors and it is best to use 0201 or 0402 body size capacitors to facilitate signal routing. Keep the connections between the bypass capacitors and the power supply on the device as short as possible. Ground the other side of the capacitor using a low impedance connection to the ground plane. [Figure 18](#) shows the layout recommendation for power supply decoupling of LMK61XX.

9 Layout

9.1 Layout Guidelines

The following sections provides recommendations for board layout, solder reflow profile and power supply bypassing when using LMK61XX to ensure good thermal / electrical performance and overall signal integrity of entire system.

9.1.1 Ensuring Thermal Reliability

The LMK61XX is a high performance device. Therefore, pay careful attention to device configuration and printed-circuit board (PCB) layout with respect to power consumption. The ground pin needs to be connected to the ground plane of the PCB through three vias or more, as shown in [Figure 18](#), to maximize thermal dissipation out of the package.

[Equation 1](#) describes the relationship between the PCB temperature around the LMK61XX and its junction temperature.

$$T_B = T_J - \Psi_{JB} \times P$$

where

- T_B : PCB temperature around the LMK61XX
 - T_J : Junction temperature of LMK61XX
 - Ψ_{JB} : Junction-to-board thermal resistance parameter of LMK61XX (37.7°C/W without airflow)
 - P : On-chip power dissipation of LMK61XX
- (1)

To ensure that the maximum junction temperature of LMK61X2 is below 125°C, the maximum PCB temperature without airflow should be at 99°C or below (89°C or below for LMK61X0) when the device is optimized for best performance resulting in maximum on-chip power dissipation of 0.68 W.

9.1.2 Best Practices for Signal Integrity

For best electrical performance and signal integrity of entire system with LMK61XX, TI recommends routing vias into decoupling capacitors and then into the LMK61XX. TI also recommends increasing the via count and width of the traces wherever possible. These steps ensure lowest impedance and shortest path for high frequency current flow. [Figure 18](#) shows the layout recommendation for LMK61XX.

Layout Guidelines (接下页)

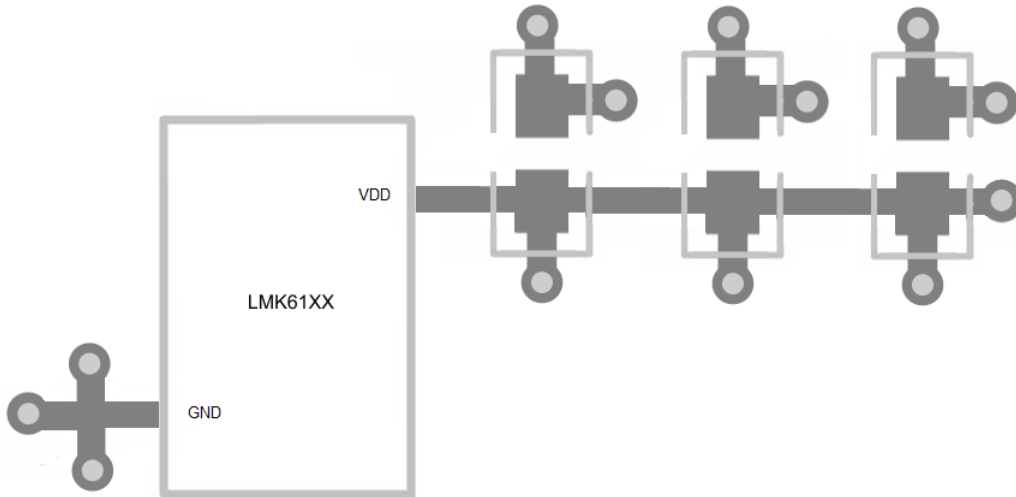

Figure 18. LMK61XX Layout Recommendation for Power Supply and Ground

9.1.3 Recommended Solder Reflow Profile

TI recommends following the solder paste supplier's recommendations to optimize flux activity and to achieve proper melting temperatures of the alloy within the guidelines of J-STD-20. It is preferable for the LMK61XX to be processed with the lowest peak temperature possible while also remaining below the components peak temperature rating as listed on the MSL label. The exact temperature profile would depend on several factors including maximum peak temperature for the component as rated on the MSL label, Board thickness, PCB material type, PCB geometries, component locations, sizes, densities within PCB, as well solder manufactures recommended profile, and capability of the reflow equipment to as confirmed by the SMT assembly operation.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

- (4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- (5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- (6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
