

## THS402x 2GHz、10V/V 稳定增益、低噪声高速放大器

### 1 特性

- 超低 1.2nV/√Hz 电压噪声
- 高速：
  - 2GHz 增益带宽积
  - 470V/μs 压摆率
  - 30ns 稳定时间 (0.1%)
- 在增益  $\geq 10\text{V/V}$  时保持稳定
- 输出驱动， $I_O = 200\text{mA}$  (典型值)
- 极低失真：
  - THD = -68dBc ( $f = 1\text{MHz}$ ,  $R_L = 150\Omega$ )
- 宽电压范围的电源：
  - $V_{CC} = \pm 4.5\text{V}$  至  $\pm 16\text{V}$
- THS4021 上的失调电压归零引脚

### 2 应用

- 超声波扫描仪
- 源测量单元 (SMU)
- 电源品质测定器

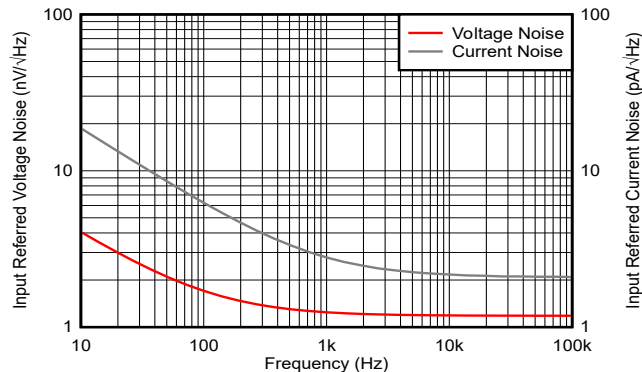

### 3 说明

THS4021 和 THS4022 (THS402x) 是超低电压噪声、高速电压反馈放大器，非常适合需要低电压噪声的应用（包括通信和成像）。单通道放大器 THS4021 和双通道放大器 THS4022 可提供卓越的交流性能，闭环带宽为 290MHz，压摆率为 470V/μs，稳定时间为 30ns (0.1%)，增益为 10V/V。THS402x 在增益为 10V/V 或更高以及 -9V/V 或更低时保持稳定。这些放大器具有 200mA 的高驱动能力，每个放大器只消耗 7.5mA 的电源电流。THS402x 在  $f = 1\text{MHz}$  时总谐波失真 (THD) 为 -68dBc，专为需要低失真的应用而设计。

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>CC-</sub> to V <sub>CC+</sub>	Supply voltage		33	V
V <sub>I</sub>	Input voltage		±V <sub>CC</sub>	V
I <sub>O</sub>	Output current <sup>(2)</sup>		240	mA
V <sub>IO</sub>	Differential input voltage		±1.5	V
I <sub>IN</sub>	Continuous input current		10	mA
T <sub>J</sub>	Maximum junction temperature	Maximum junction temperature		150 °C
T <sub>A</sub>	Operating free-air temperature	C-suffix		0 70 °C
		I-suffix		- 40 85 °C
T <sub>stg</sub>	Storage temperature	- 65	150	°C
	Lead temperature 1.6 mm (1/16 inch) from case for 10 seconds		300	°C

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
- (2) When continuously operating at any output current, do not exceed the maximum junction temperature. Keep the output current less than the absolute maximum rating regardless of time interval.

### 5.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/ JEDEC JS-001, all pins <sup>(1)</sup>	±1000
		Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>CC</sub>	Supply voltage	Dual-supply	±4.5	±15	±16
		Single-supply	9	30	32
T <sub>A</sub>	Operating free-air temperature	C-suffix	0	25	70
		I-suffix	- 40	25	85

## 6 Detailed Description

### 6.1 Overview

The THS402x are high-speed operational amplifiers configured in a decompensated voltage-feedback architecture. The THS402x are stable with gain configurations of 10 V/V or greater. These amplifiers are built using a greater than 30-V, complementary, bipolar process with NPN and PNP transistors possessing an  $f_T$  of several GHz. This configuration results in exceptionally high-performance amplifiers with wide bandwidth, high slew rate, fast settling time, and low distortion.

图 6-2. THS4022: Dual Channel

S0276-01

图 6-3. THS4021 Simplified Schematic

## 6.3 Feature Description

### 6.3.1 Offset Nulling

The THS402x have a very low input offset voltage for high-speed amplifiers. However, if additional correction is required, an offset nulling function has been provided on the THS4021. To adjust the input offset voltage, place a potentiometer between pin 1 and pin 8 of the device, and tie the wiper to the negative supply. 图 6-4 shows this feature.

图 6-4. Offset Nulling Schematic

## 6.4 Device Functional Modes

The THS402x family has a single functional mode and can be used with both single-supply or split power-supply configurations. The power-supply voltage must be greater than 9 V ( $\pm 4.5$  V) and less than 33 V ( $\pm 16.5$  V).

## 7 Application and Implementation

### 备注

以下应用部分中的信息不属于 TI 器件规格的范围，TI 不担保其准确性和完整性。TI 的客户应负责确定器件是否适用于其应用。客户应验证并测试其设计，以确保系统功能。

### 7.1 Application Information

#### 7.1.1 Driving a Capacitive Load

The THS402x are internally compensated to maximize bandwidth and slew-rate performance. To maintain stability, take additional precautions when driving capacitive loads with a high-performance amplifier. As a result of the internal compensation, significant capacitive loading directly on the output node decreases the device phase margin, and potentially lead to high-frequency ringing or oscillations. Therefore, for capacitive loads greater than 10 pF, place an isolation resistor in series with the output of the amplifier. 图 7-1 shows this configuration. For most applications, a minimum resistance of 20 Ω is recommended. In 75-Ω transmission systems, setting the series resistor value to 75 Ω is a beneficial choice because this value isolates any capacitance loading and provides source impedance matching.

图 7-1. Driving a Capacitive Load

#### 7.1.2 General Configuration

When receiving low-level signals, limiting the bandwidth of the incoming signals into the system is often required. 图 7-2 shows how the simplest way to accomplish this limiting is to place an RC filter at the noninverting pin of the amplifier.

图 7-2. Single-Pole Low-Pass Filter

## 7.2 Power Supply Recommendations

The THS402x devices are designed to operate on power supplies ranging from  $\pm 4.5$  V to  $\pm 16$  V (single-ended supplies of 9 V to 32 V). Use a power-supply accuracy of 5% or better. When operated on a board with high-speed digital signals, make sure to provide isolation between digital signal noise and the analog input pins. The THS4021 and THS4022 are connected to the positive power supply ( $V_{CC+}$ ) through pin 7 and pin 8, respectively. Both devices use pin 4 for the negative power supply ( $V_{CC-}$ ). Decouple each supply pin to GND as close to the device as possible.

## 7.3 Layout

### 7.3.1 Layout Guidelines

To achieve the levels of high-frequency performance of the THS402x, follow proper printed-circuit board (PCB), high-frequency design techniques. The following is a general set of guidelines. In addition, a THS402x evaluation board is available to use as a guide for layout or for evaluating the device performance.

- **Ground planes**—make sure that the ground plane used on the board provides all components with a low-inductive ground connection. However, in the areas of the amplifier inputs and output, the ground plane can be removed to minimize stray capacitance.
- **Proper power-supply decoupling**—use a 6.8- $\mu$ F tantalum capacitor in parallel with a 0.1- $\mu$ F ceramic capacitor on each supply pin. Sharing the tantalum capacitor among several amplifiers is possible depending on the application, but always use a 0.1- $\mu$ F ceramic capacitor on the supply pin of every amplifier. In addition, place the 0.1- $\mu$ F capacitor as close as possible to the supply pin. As this distance increases, the inductance in the connecting trace makes the capacitor less effective. Strive for distances of less than 0.1 inch (2.54 mm) between the device power pins and the ceramic capacitors.
- **Short trace runs or compact part placements**—optimum high-frequency performance is achieved when stray series inductance has been minimized. To realize this, make the circuit layout as compact as possible, thereby minimizing the length of all trace runs. Pay particular attention to the inputs of the amplifier, keeping the trace lengths as short as possible. This layout helps to minimize stray capacitance at the input of the amplifier.

### 7.3.1.1 General PowerPAD™ Integrated Circuit Package Design Considerations

The THS402x is available in a thermally-enhanced DGN package, which is a member of the PowerPAD™ integrated circuit package family. 图 7-3 a and 图 7-3 b show that this package is constructed using a downset leadframe upon which the die is mounted. 图 7-3 c that this arrangement results in the leadframe being exposed as a thermal pad on the underside of the package. Because this thermal pad has direct thermal contact with the die, excellent thermal performance can be achieved by providing a good thermal path away from the thermal pad.

The PowerPAD integrated circuit package allows for both assembly and thermal management in one manufacturing operation. During the surface-mount solder operation (when the leads are being soldered), the thermal pad can also be soldered to a copper area underneath the package. Through the use of thermal paths within this copper area, heat can be conducted away from the package into either a ground plane or other heat dissipating device.

The PowerPAD integrated circuit package represents a breakthrough in combining the small area and ease of assembly of the surface mount with the previously awkward mechanical methods of heat sinking.

More complete details of the PowerPAD installation process and thermal management techniques are found in [PowerPAD Thermally-Enhanced Package](#). This document is found on the TI website ([www.ti.com](http://www.ti.com)) by searching on the keyword PowerPAD. The document can also be ordered through your local TI sales office; refer to SLMA002 when ordering.

NOTE: The thermal pad (PowerPAD integrated circuit package) is electrically isolated from all other pins and can be connected to any potential from  $V_{CC-}$  to  $V_{CC+}$ . Typically, the thermal pad is connected to the ground plane because this plane tends to physically be the largest and is able to dissipate the most amount of heat.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

<sup>(5)</sup> Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

<sup>(6)</sup> Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
